

RESTAURANT OWNER CONTROL SYSTEM

Know exactly what your restaurant **really** earns.

POS, kitchen, stock, staff and salary, loyalty, delivery, your website and accounts in one system for restaurants and cafes in Bangladesh.

Monthly price, discounted

1,000 BDT per month

First month free

dt-restora.datatechbd.com

READ THIS PAGE FIRST

Three questions every owner asks.

This book answers them in plain words. If you only have two minutes, this page is enough.

1 Why does my business need this?

Because paper, guesswork and scattered apps hide where your money goes. You cannot fix a cost you cannot see. **Pages 3 to 4**

2 How does the software help me?

It sells more, wastes less, serves faster and shows your real profit, every day, for every branch. **Pages 5 to 18**

3 How do I digitalize my restaurant?

Five simple steps, from a free look at the demo to your first day of live sales. **Pages 19 to 20**

The simple promise.

You will always know what you sold, what it cost, what was lost and what is left. No spreadsheets at midnight, no surprises at month end.

**More orders****Less waste****Faster service****Clearer reporting**

PART 1 · WHY

Your restaurant is losing money in places you cannot see.

Busy kitchens rarely fail because the food is bad. They struggle because small leaks go unnoticed for months.

**Waste nobody records**

Spoiled, dropped and given-away food disappears without a trace, so the cost never reaches your reports.

**Stock that is a guess**

You find out an ingredient is gone when the kitchen runs out, or you over-buy because nobody knows what is on the shelf.

**Bills and cash that do not match**

Hand-written bills, discounts without approval and drawer differences are hard to trace afterwards.

**Profit known too late**

When numbers are put together at month end, it is too late to fix what happened three weeks ago.

**Delivery apps on separate tablets**

Orders arrive on different devices, get typed again by hand, and the commission quietly eats the margin.

**Branches you cannot compare**

With more than one outlet, you rely on phone calls and trust instead of one clear picture.

You cannot manage what you cannot see. DT Restora turns each of these blind spots into a number on your screen.

THE BUSINESS CASE FOR GOING DIGITAL

Digital is not a cost. It is how you keep more of what you earn.

TODAY, ON PAPER

Bills written by hand

Stock counted by guess

Waste found out too late

Profit known at month end

Sales only at your door

Trust-based cash handling

WITH DT RESTORA

Every order recorded at the till

Stock reduces automatically with each sale

Every loss logged with a reason and a cost

Profit visible today, branch by branch

Website, QR and delivery orders in one place

Shift counts and an activity log for every override

What this means for the owner

Protect margin

See food cost, waste and commission before they eat your profit.

Save time

Stop re-typing orders and building reports by hand.

Sleep easier

Control every branch without standing in every kitchen.

Customers already expect it. Guests order on their phones, scan QR codes and check delivery status. A restaurant that can do this wins the repeat order.

PART 2 · HOW IT HELPS

Not just a POS. A **complete restaurant system.**

Every part below shares the same menu, customers, staff and numbers. A sale at the till updates the kitchen, the stock, the books and the owner dashboard without anyone typing it twice.

SELL POS and tables Kitchen display Orders and payments Ordering website**CUSTOMERS** Loyalty points Coupons QR table ordering Customer accounts**STOCK** Recipes and costing Purchasing Wastage log Counts and transfers**PEOPLE** Staff and shifts Attendance device Payroll and salary slips HR letters**GROW** Delivery and riders Delivery apps Careers and blog Photo and video gallery**CONTROL** Accounting Reports and exports Many branches Activity log and offline sync**More orders**

Every channel open

Less waste

Losses made visible

Faster service

Till and kitchen in sync

Clear reports

One true number

24 tools, one login. Start with the till and kitchen, and switch on stock, staff, loyalty, delivery and your website when you are ready.

POS TERMINAL

A till your cashier learns in **minutes**.

Fast order entry on a tablet or touch screen, with every payment method and the receipt printer working together.

Tables, hold and resume

Park a ticket while guests decide

Split payments

Two or more methods on one bill

80mm thermal receipts

Reprints are logged

Cash, bKash, Nagad, card

With a change calculator

Discount approval

Above your limit needs a manager

Shift cash count

Expected, counted, difference

YOUR OWN ORDERING WEBSITE

Orders come in **while you cook.**

A bilingual, mobile-first website with menu photos, checkout and live tracking. Every order lands on the kitchen screen.

● Dish page with photos and video

● Checkout with SMS code

● Live order tracking

 **Bangla and English**
Customers pick their language

 **Multiple photos and videos per dish**

 **Delivery zones and fees**

 **QR table ordering**
Scan, browse, order

 **Order confirmed by SMS code**

 **Search-friendly pages**
Built to be found on Google

Your menu, always open. Guests order at midnight and you see the order when you open. No missed calls, no wrong orders.

KITCHEN DISPLAY

The kitchen sees every order, instantly.

No shouting, no lost paper slips. Tickets from the till, the website and QR tables appear in one live board.

Live columns

Pending, preparing and ready, with the dish list and notes on every ticket.

Time on every ticket

See how long an order has waited, so slow plates are caught early.

One tap to progress

Start preparing, then mark served. The till and customer tracking update.

 **Dine-in, takeaway and delivery**
Each ticket shows its type and table

 **Website and QR orders**
Appear without anyone re-typing

 **Sound alert**
A chime for every new ticket

 **Works offline**
Local tickets keep flowing

Faster service, calmer kitchen. When everyone sees the same board, the pass moves faster and fewer orders go missing.

Know what every plate really costs.

The screenshot shows the macOS System Preferences window with the 'Keyboard' pane selected. The sidebar on the left lists various system preferences, with 'Keyboard' highlighted. The main pane displays the 'Keyboard' settings. Under the 'Keyboards' section, two keyboards are listed: 'Apple Keyboard' and 'Apple Keyboard II'. The 'Apple Keyboard' is selected, and its settings are shown. The 'Keyboards' section includes a 'Keyboards' button, a 'Keyboards' button, and a 'Keyboards' button. The 'Keyboards' button is highlighted. The 'Keyboards' button is highlighted. The 'Keyboards' button is highlighted.

The screenshot shows the macOS Spotlight search interface. At the top, the search bar contains the text "dt". Below the search bar, the results are categorized into "Applications" and "Files". Under "Applications", there is a single result: "dt" (Data Transfer Utility), which is highlighted. Under "Files", there are several results, including "dt" (Data Transfer Utility) and "dt" (Data Transfer Utility). The "dt" (Data Transfer Utility) application is highlighted in the "Applications" section.

The screenshot shows the macOS System Preferences window with the 'Network' pane selected. The 'Ethernet' section is active, displaying a 'Connected' status with a green indicator. Below the status, a table shows network statistics: Packets sent (10), Packets received (10), Bytes sent (1000), and Bytes received (1000). The 'Advanced' tab is also visible, showing a list of network protocols: IPv4, IPv6, TCP, UDP, ICMP, and DNS.

- **Delivery-app channels and commission**

How a delivery flows

Every status change shows on the customer tracking page. Riders use a mobile page, switch duty on and off and share location while on a trip.

- **Rider assignment**
The system suggests free riders

**Delivery zones**
Fee and minimum order per zone

**Delivery-app orders**
Foodpanda, Pathao and manual entry

**Rider mobile page**
Assigned orders, status buttons, navigation

**Cash on delivery check**
Reconcile each rider

**Payout reconciliation**
Expected versus received per app

Commission is never a surprise. Delivery-app commission is recorded per order, so profit is shown after the app takes its share.

CLEARER REPORTING

Your **real profit**, every day, every branch.

1 Stock alerts

2 Sales by channel

3 Profit build-up

4 Branch comparison

+ Net sales all channels

- Food cost from recipes

- Wastage with reasons

- Staff salary allocated daily

- Expenses and commission

= Net profit today, per branch

Owner dashboard

Today, this week or month. Gross and net sales, costs, alerts and estimated profit on one screen.

Same number everywhere

The dashboard, reports and accounting profit and loss all agree.

Decide with facts. Spend your time choosing what to cook, buy and promote, not adding up numbers.

ACCOUNTING AND REPORTS

Books that write themselves.

Every sale, purchase, expense and salary posts to a proper double-entry ledger, so your accountant gets clean statements.

Fiscal year lock
Posted entries are reversed, never edited

Branch-wise results
Compare outlets side by side

No end-of-month panic. Your books are up to date every day, because nobody has to re-type the sales.

FASTER SERVICE, SAFER CASH

Everyone sees only **their own job.**

Each role gets a clean screen with just the tools they need, so training is quick and mistakes are rare.

ROLE	WHAT THEY GET
Owner	Dashboard, profit, branch comparison, approvals and every report
Branch manager	Daily operations, stock requests, shifts, discount approval, delivery dispatch
Cashier	POS, payments, split bills, shift open and close with cash counting
Waiter	Table view, order entry and their own orders
Kitchen manager	Kitchen display, recipes, stock intake, wastage and stock counts
Accountant	Journals, vouchers, payables, statements and period lock
Rider	Assigned deliveries, status buttons, navigation and cash summary

Control without micromanaging

Discounts above your limit need manager approval. Voids need a reason. Every override is written to an activity log.

Cash that adds up

Each cashier opens and closes a shift. The system shows expected cash, counted cash and the difference.

Shifts and salary

Clock in and out, with salary cost spread into each day's branch profit.

SMS where it matters

Order confirmations, delivery status and an owner daily summary.

Easy to learn. A new cashier only has to learn one screen, so a busy week with new staff does not slow you down.

CONTROL AND SET-UP

Run many branches from one screen.

Branches, tables, menu, settings and an activity log keep the whole group organised and accountable.

● Branches with their own hours and settings

● Tables and QR codes for ordering

● VAT, service charge, limits and more

● Activity log of every sensitive change

● Menu with sizes, add-ons and photos

● Sync conflicts screen for offline work

Branch switcher

Managers see only their branch

Activity log

Who changed what, and when

Table QR codes

Print and stick on each table

Offline sync review

Anything not accepted is flagged

One owner, many outlets. Add a branch in minutes and compare results from the same dashboard.

WEBSITE CONTENT, HIRING AND BRAND

Build your brand **beyond the menu.**

Publish dishes with photos and videos, share news on a blog, show your gallery and hire staff, all from the same admin.

● Photos and videos for each dish

● Blog posts for news and offers

● Job openings and applications

● Public photo and video gallery

● Blog on your website

● Careers page with application form

Multiple photos and videos per dish

YouTube, Vimeo or uploaded files

Blog, FAQ and policy pages

Search-friendly and bilingual

Careers and applications

Private CV storage

Locations pages

Photos, hours and map per branch

Be found, be trusted. A good website with real photos, news and open jobs makes a restaurant look established and keeps guests coming back.

PEACE OF MIND

Built to keep working when **things go wrong.**

Internet cuts, busy rushes and staff changes should never stop service or hide the truth.

**Works offline**

The POS and kitchen screen keep running without internet. Cash orders are saved on the device and print receipts as usual.

**Syncs by itself**

When the connection returns, orders upload without duplicates. Anything that cannot be accepted goes to a clear review screen.

**Your own installation**

Every client gets a separate system and database. Your data is not mixed with anyone else.

**Clear audit trail**

Voids, discount overrides, stock changes, price changes and reprints are all recorded with who and when.

**Daily backups**

Automatic daily database backup, with a documented restore procedure.

**English and Bangla**

Screens, messages, SMS and receipts work in both languages.

Honest about the limits. bKash, Nagad and card payments, delivery-app intake, SMS and the website need an internet connection. When offline the screen says so clearly, and the cashier can keep selling with cash.

PART 3 · HOW

Go digital in **five simple steps.**

You do not need to be technical. Start with the demo and move at the pace of your kitchen.

1

Try the live demo

Open dt-restora.datatechbd.com and see every screen working. Nothing to install and no risk.

2

We install it for you

One-time installation by Datatech BD. Your own system, your own data, your branches.

3

Add your menu, recipes and team

Prices, sizes, tables, ingredients and staff roles are set up once. Recipes unlock waste and cost tracking.

4

Train your staff

Short guides for each role in English and Bangla. Cashiers, kitchen and managers each learn only their screen.

5

Go live and watch profit

Start taking orders. Read your dashboard daily and fix leaks as they appear.

What you need

- ✓ A tablet, touch monitor or computer for the till
- ✓ An 80mm thermal printer for receipts
- ✓ Optional: cash drawer, barcode scanner
- ✓ A screen or printer for the kitchen

Grow at your own pace

Start with POS and kitchen. Add stock tracking, the website, delivery and loyalty when you are ready.

Low risk start

Your first month is free after installation, so you can see the value before the first monthly payment.

GROW IN STAGES, AT YOUR PACE

Stage 1

Till and kitchen

POS, receipts, kitchen display and daily sales.

Stage 2

Stock and costs

Recipes, wastage, purchasing and food cost.

Stage 3

Grow sales

Website, QR, delivery, loyalty and more branches.

Not sure where to start? Call or WhatsApp 8801304734623 and we will suggest the right first stage for your restaurant.

SIMPLE, HONEST PRICING

Start free. Then **1,000 BDT** a month.

1,000

BDT per month ~~5,700 BDT regular price~~

Discounted monthly price. You pay 4,700 BDT less every month than the regular price.

Included in the monthly price

- ✓ POS, kitchen display and offline mode
- ✓ Stock, recipes, wastage and purchasing
- ✓ Ordering website, QR and delivery tools
- ✓ Dashboard, reports and accounting

**First month free**

Your free month begins after installation.

**2,500 BDT installation**

One-time fee. Refundable after one year of use if you cancel.

**Yearly: 2 months free**

Pay yearly and get two months free. Pay for ten, use twelve.

WHEN	WHAT YOU PAY
At installation	2,500 BDT one time
First month	Free
Monthly plan	1,000 BDT per month
Yearly plan	2 months free

Why it pays for itself

Less waste you can see, fewer cash differences, no hand-written bills to re-add and more orders from every channel. Each one protects margin that is invisible on paper today.

GOOD TO KNOW

Short answers to **common** questions.

I am not good with computers.

Each role sees a simple screen with only its own tools, and short guides are provided in English and Bangla.

What if the internet goes down?

The POS and kitchen screen keep running. Cash orders are saved and sync when the connection returns.

Do I have more than one branch?

Branches are built in. Managers see their own branch and you see them all, with profit side by side.

Can I take bKash and Nagad?

Yes: cash, bKash, Nagad and card, including split payments across methods.

Do I need the website?

Not on day one. Start with the till and kitchen, and turn on online ordering when you want it.

Whose data is it?

Yours. Every client has a separate installation and database, with daily backups.

Can I connect delivery apps?

Orders from any delivery app can be entered on a built-in screen from day one. Direct connections depend on each platform's partner access.

What about VAT and receipts?

VAT and service charge are configurable per branch. Please confirm local requirements with your accountant.

See it before you decide. Open the live demo at dt-restora.datatechbd.com and click through every screen.

YOUR NEXT STEP

Ready to see your **real numbers?**

Book a free demo. We will walk through the system with your menu, your branches and your questions in mind.
